Considerations**

LEARN MORE

Curriculum Summary

Develop a fundamental knowledge of topics including fetal, neonatal and paediatric cardiac anatomy and physiology, pharmacological considerations, peri/postoperative care and much more.

Explore the nuances of family-centred care such as providing support to families with an antenatal diagnosis of congenital heart disease through personalized care plans like palliative, complex and transitioning to adult care.

Lead case presentations and participate in peer-to-peer debates on ethical issues in paediatric cardiology.

Enable Global Child Health

Exchange knowledge and experiences with learners from all over the world.
