

Survey Information

This global research survey aims to gather information on current approaches to sedation and pain management of mechanically ventilated children with moderate to severe TBI in the Pediatric Intensive Care Unit (PICU). The findings will contribute to advancing knowledge and informing future investigations in this area.

Who can participate?

Clinicians who routinely care for pediatric patients with moderate to severe TBI and who prescribe or recommend analgesia and sedative regimens.

About the survey:

Estimated time: 5–10 minutes

Participation is voluntary and anonymous

Reviewed and granted exempt status by the IRB at Johns Hopkins University School of Medicine
